Team Project

TodoApp

Team Project (In this example, TodoApp)

Build a web app together to prevent missed deadlines.

Tools and Weekly Rhythm

- **GitHub:** code, tests, docs, design (technical evidence).
- **Canvas:** goals, plans, weekly updates, submissions.
- **GitHub Pages:** portfolio site.

Leaders review Canvas at the first weekly meeting.

Weekly Update (Each Member)

Update your Canvas contribution page weekly:

1. **Goals** — milestones; on track?
2. **Progress** — done, and next
3. **Blockers** — with a recovery plan
4. **Metrics** — burndown rate, tests, lines of code
5. **Links** — to your GitHub artifacts

The leader will **not** remind you. Report stalled progress early — no surprises.

Weekly Presentations (Team Leader)

1. **Compile** member updates from Canvas; no separate report.
2. **Be specific:** "3 of 4 requirements done."
3. **Report risks, not names:** report delays openly; handle individual issues privately.
4. **Team issues:** escalate to the professor (manager).

RECOMMENDED

Read the story!

New to the process? Read the project story in the ASE 230 GitHub repository. Its location may change.

- Story PDFs, practice guides, videos, and questions explain the process.
- For actual rules (including individual evaluation), follow this lecture and Canvas.

Ceremonies and Timeline

When	What
W1–W3	Preparation
W4	**PPP**
Until the first midterm	Sprint 1, then S1R (internal)
Right after the midterm	**S1P**
After S1P	Sprint 2, then S2R (internal)
W16	**FP**

PPP = Project Plan Presentation, S1P = Sprint 1 Presentation, FP = Final Presentation, S1R/S2R = Sprint 1/2 Retrospective.

First midterm: around W9–10. Check Canvas for dates.

Homework and Presentations

- **HW2:** PPP. **HW4:** S1R & S1P. Final submission before FP.
- Everyone presents at **PPP, S1P, FP**. S1R/S2R are internal.
- **Canvas sets the actual dates.**

Deadlines and Extensions

- Late work without an approved extension: **zero**.
- Request extensions **48+ hours before** the deadline.
- If approved: +1 week, with a **20% deduction** from the earned score.
- Plan and communicate early — no surprises.

Preparation (W1–W3)

- **W1:** Teams of 3–4 (5 only in special cases). Choose a leader and a functional name (*Early Starter*).
- **W1–W3:** Install tools, run the example (HW1).
- **HW2:** Draft features/requirements; the leader compiles goals and plans for both sprints.

Repository and Canvas Setup

- The leader creates the GitHub repo; members join as collaborators.
- **README.md:** the project's entry point and links.
- Folders: `docs/` (documents), `src/`, `tests/`, `individual/` (member progress).
- The Canvas team page links everything.

Team Rules

Write, agree on, and fairly enforce team rules, including for the leader.

- Rules without enforcement are worse than no rules.
- State consequences clearly.
- Include your **Definition of Done**.

PPP (W4)

Tell the story: **why** → **what** → **plan**.

- **Why:** problem and users
- **What:** features, testable requirements, acceptance criteria
- **Plan:** data model, architecture, ownership, sprint goals, schedule, team rules
- Slides/PDF in GitHub, linked from Canvas.

Sprint 1 (until the first midterm)

- Build the MVP; leaders report weekly (GitHub + Canvas).
- Before S1P, hold **S1R**: what worked, what didn't, what to improve. Record actions and owners; no blame.

HW4 (before S1P)

- Finalize Sprint 1 code, tests, and docs.
- Update the user, architecture, and REST API docs.
- Prepare slides, a demo video (backup for a live demo), and the revised Sprint 2 plan.

S1P (right after the first midterm)

- Each member demos features and compares promises with results (tests).
- Share challenges and lessons; present the Sprint 2 plan.
- Keep it brief (reference: ~5 min + 5 min Q&A). Canvas sets the slot.

Sprint 2 (after S1P, until FP)

- Implement the revised plan; refactor, rerun all tests, update docs.
- **Dogfooding:** use your own product to find usability issues.
- Before FP, hold **S2R**: reflect on planning, communication, tests, and quality.

FP (W16)

Present both sprints with acceptance-test evidence and lessons learned.

- Every member presents their contribution. Publish slides/artifacts before class.

Evaluation

Rubrics evaluate delivery against your plan.

What Evaluation Looks At

- Planned vs. delivered work
- Sustained weekly progress — not last-minute bursts
- Quality of artifacts (code, tests, docs)
- Acceptance-test evidence
- How well you communicated risks and changes
- Your individual contribution to the team

Evidence-Based Evaluations

- Members evaluate **themselves, peers, and the leader**.
- The leader evaluates **themselves and each member**, and submits shared results.
- Use evidence: plans, commits, reviews, tests, Canvas updates.
- Be specific: "responded within 2 hours" beats "Good."
- Check the Canvas rubric for points.

Plan Ahead, Don't Sprint at the End

> Last-minute rushing causes late, low-quality work.

1. **Plan Wisely:** target one week before the deadline.
2. **Communicate Early:** report issues immediately.
3. **Deliver Consistently:** the rubric rewards sustained weekly progress.

Changes in Goals or Plans

> Report goal or plan changes immediately.

1. **Update Plans:** report changes and reasons on Canvas.
2. **Update Artifacts:** update affected GitHub files.
3. **Weekly Meetings:** leaders discuss changes in weekly presentations.

Project Results Can Strengthen Your Portfolio

> Consider adding at least two projects to your portfolio after an ASE course.

1. **Prove Capability:** show real problem-solving skills.
2. **Showcase & Promote:** GitHub hub, one-page summary, LinkedIn highlights.
3. **Be Proud:** share successes and how you recovered from failures.

My Recommendations: Work Habits

1. **SEFE First:** *Start Early to Finish Early*.
2. **No Surprises:** Keep others updated on your progress.
3. **Control What You Can:** Set goals and milestones; accept small wins and failures.

Learning Mindset

1. **Learn & Celebrate:** Enjoy your successes and learn from your failures.
2. **Growth Over Points:** Focus on developing skills, not just earning grades.
3. **Ask for Help:** Tell me when you need support.

Presenting Well

> Stay composed and natural, no matter what happens.

1. **Know Your Audience:** Problem and value first, then technical details.
2. **Show Evidence:** Demonstrate the result and connect it to your plan.
3. **Be Concise:** Keep it short and focused.
4. **Add Page Numbers:** Make slides easy to reference.
