

Firestore + Dart: Quick Start Guide

Learn how to:

- Create a Firestore project
- Add authentication and Firestore
- Write a basic Dart app for login/register

Step 1: Create Firebase Project

1. Go to  <https://console.firebase.google.com>
2. Click **Add Project**
3. Enter a name (e.g., `my-firebase-app`)
4. Follow the steps to create the project
5. Add a **Web App** → get `firebaseConfig`

Step 2: Enable Authentication

1. In the Firebase Console:
2. Go to **Build** → **Authentication**
3. Click **Get Started**
4. Enable **Email/Password** sign-in method

Step 3: Create Firestore Collection

1. Go to **Build** → **Firestore Database**
2. Click **Create database** (start in test mode)
3. Create a collection:
 - Name: `users`
 - Add document with fields: `email`, `createdAt`

Step 4: Add SDKs

Include Firebase in your Dart (web) project:

```
<!-- index.html -->  
<script src="https://www.gstatic.com/firebasejs/10.3.0/firebase-app.js"></script>  
<script src="https://www.gstatic.com/firebasejs/10.3.0/firebase-auth.js"></script>  
<script src="https://www.gstatic.com/firebasejs/10.3.0/firebase-firestore.js"></script>
```

Step 5: Init Firebase

```
const firebaseConfig = {  
  apiKey: "...",  
  authDomain: "...",  
  projectId: "...",  
};  
  
firebase.initializeApp(firebaseConfig);  
const auth = firebase.auth();  
const db = firebase.firestore();
```

Step 6: Register & Login (JS Example)

```
// Register
auth.createUserWithEmailAndPassword(email, password)
  .then(user => console.log(user))
  .catch(err => console.error(err));

// Login
auth.signInWithEmailAndPassword(email, password)
  .then(user => console.log(user))
  .catch(err => console.error(err));
```

Optional: Dart (package:firebase)

1. Use Flutter or `dart:html` with JS interop
2. Or try [firebase_dart](#)

```
# pubspec.yaml
dependencies:
  firebase_dart: ^1.0.0
```

```
import 'package:firebase_dart/firebase_dart.dart';

final app = await Firebase.initializeApp(options: FirebaseOptions(...));
final auth = FirebaseAuth.instanceFor(app: app);
await auth.signInWithEmailAndPassword("email", "password");
```

Summary

Feature	Where to Set Up
Project	Firebase Console
Auth	Enable Email/Password
Firestore	Create <code>users</code> collection
Dart Program	Use <code>firebase_dart</code>

Let me know if you want a full Flutter version!
